Chaos Player

What's new

January 2022

Introduction

Chaos Player is Pdplayer's successor — a professional image sequence player designed for fast and smooth playback. Artists and supervisors can use it to review their own or their team's animation output in playback right after rendering finishes.

This release brings users a new, in-house developed new version of the product, which comes with a number of exciting features and enhancements, including a speed boost, full color precision, an all-new feature that enables artists and supervisors to compare different versions of a shot and do tech checks, an enhanced user interface, extended output formats, workspaces, plus more.

What's new

Here are the highlights in the release:

A boost to speed and precision — Chaos Player comes with caching speed improvements, full color precision, as well as support for OpenColorIO v2.

A/B wipe compare — Compare up to four versions of a shot in playback. Swipe and zoom into the details to tech-check and help perfect your own and other people's work.

Enhanced user interface — Stay focused with a new, neutral color theme. The interface now scales on HiDPI screens and offers you easy access to the tools you use most, plus a smoother full-screen experience.

Output formats extended with MP4 — Now you can export your compositions to one of the most commonly used video file formats — MP4.

Workspaces — Choose your workspace mode - Classic to unleash the full power of Chaos Player, or Playback to limit distractions and stay focused on reviewing your work or other people's.

Create your world.
